

JACOB CLOSTIO

Relocating to Seattle, WA | (406) 407-2217 | jacobclostio@gmail.com | jclostio.github.io | linkedin.com/in/jacob-clostio

PROFESSIONAL SUMMARY

Full-stack software engineer with 3+ years building and shipping features for a P&C insurance platform (Angular, .NET, Azure). Owning features end-to-end, from design plan through release, with recent projects including state regulatory reporting, third-party service integrations, and rebuilds of the platform's largest workflows. BS in Computer Science, Summa Cum Laude. Targeting SWE roles in the Seattle area.

SKILLS

Languages: C#, TypeScript/JavaScript, SQL, HTML/CSS, Python, Java

Frameworks & Libraries: Angular, React, .NET 10, ASP.NET Core, Moq, Jasmine, ngx-formly, PrimeNG

Cloud & Infrastructure: Azure Functions, Azure Pipelines, Azure SQL Database, Azure Elastic Pool, Application Insights, Docker

Data & Storage: Microsoft SQL Server, Azure Blob Storage, Azure Table Storage, Redis, in-memory caching, MongoDB, MySQL

Tools & Practices: Git, Postman, SSMS, Agile/Scrum, unit testing, CI/CD, technical design documentation

EXPERIENCE

Software Engineer I | WaterStreet Company Jan 2024 – Present

Cloud-based, environment-agnostic P&C insurance software platform (Policy Administration, Claims, Billing, Insured Portal, BI) serving 7 carrier clients, with \$10B+ in premium processed

- Designed and built a statistical reporting integration for the Texas Insurance Checking Office (TICO) from scratch, generating strictly formatted data files required by the Texas Department of Insurance for auto, residential, and farm/ranch lines, a compliance requirement for carriers to legally operate in the state; covered with a full unit test suite.
- Built two additional third-party integrations: Quadrins, a real-time policy validation service gating policy bind-eligibility, and LenderDock, an automated lender notification service that replaced manual policy verification and change notices.
- Led end-to-end overhauls of the platform's three largest configurable workflow wizards (Create Transaction/Quote, Create Claim, and Claims Refunds), restructuring step order and adding conditional auto-population of fields based on prior input.
- Built the Import Policy Utility, a new C#/.NET utility and supporting entity layer that parses and validates CSV policy data into strongly typed system objects, including a reusable Policy Locator class for lookup and retrieval across the codebase; fully unit tested.
- Partnered with Business Analysts on client-specific specs and Configuration Engineers on client onboarding, running feature demos to validate implementations against requirements.
- Authored engineering design plans for lead approval before development and release build notes flagging breaking changes for downstream configuration teams, per company-wide process.

Software Engineer I | StioTech May 2023 – Jan 2024

Cloud-based startup building Insurance Agency Management Systems on a microservice architecture

- Developed and maintained UI components in React, including login/authentication-flow features, within a microservice-based architecture for a production insurance agency management platform.
- Worked within Agile sprints alongside backend and design stakeholders, and across NoSQL (MongoDB) and relational (MySQL) data stores.

EDUCATION

Montana State University *Aug 2019 – May 2023*

B.S., Computer Science – Minor in Mathematics | Summa Cum Laude | GPA: 3.76

CERTIFICATIONS

AINS 102 – Property and Liability Insurance Principles, The Institutes

ADDITIONAL INFORMATION

- Personal projects: Friendly Fracas (friendly-fracas.vercel.app) – a daily competitive game with a shared leaderboard; Nationdle – a daily geography guessing game ([portfolio](#))
- Interests: skiing, biking, and learning guitar
